Coronavirus is spread easily and is deadly. Stay home whenever you can. Don’t leave your house unless it’s absolutely necessary.

Wear a cloth face covering like a scarf or bandana, if you have to leave your house. Stay 6 feet away from other people and wash your hands often to protect yourself and others.

Don’t visit friends and family because you may put each other at risk of getting sick.

Stay connected and talk with friends and family over the phone or online.

Clean and disinfect frequently touched surfaces in your house like sinks, toilets, phones, light switches, doorknobs and TV remotes, with soap and water or disinfecting wipes.
